

Abstract – Trace Tracker App

Trace Tracker App (To-Do List):

The **Trace Tracker App** is a lightweight and user-friendly web application focused on helping users manage their daily tasks through a digital **To-Do List**. Its primary goal is to improve personal productivity and time management by providing a clear and organized interface for task tracking.

Users can **add**, **edit**, **mark as complete**, and **delete** tasks from their list. The interface is clean and intuitive, designed using **HTML**, **CSS**, and **JavaScript**, ensuring smooth performance without the need for installation or advanced setup.

Each task is listed clearly, and completed tasks are visually marked, allowing users to quickly track their progress. The application runs entirely in the browser, making it ideal for quick personal use without requiring account registration or login.

The app is especially useful for students, professionals, or anyone who needs a simple way to keep track of their responsibilities. It can also serve as a base for future development, including features like task priorities, reminders, or cloud syncing.

In short, Trace Tracker provides a simple, accessible, and efficient digital alternative to handwritten to-do lists.
